

1                   **COMPUTER DATABASE ACCESS**

2                   **ABSTRACT OF THE DISCLOSURE**

3                 Disclosed are systems and methods for a management application  
4         accessing a database of interest, including the management application creating  
5         an object for indicating a unique identifier for a data item using a SET  
6         command; an agent storing the unique identifier in the restricted intermediate  
7         database; the management application creating an object for indicating a data  
8         type for the data item, the creating including use of a SET command; the agent  
9         storing the data type in the restricted intermediate database; the management  
10       application creating an object for indicating an action to be performed on the  
11       data item with respect to the database of interest, the creating including use of a  
12       SET command; the agent issuing an action command to perform the action; and  
13       the agent receiving a response and sending it to the management application.
